PyRETIS — RETIS analysis

RETIS analysis report generated by PyRETIS version 3.0.0.dev0+098fc56 on 30.12.2021 10:19:49.
The main results are:

- The crossing probability: $P_{\mathrm{cross}} =$ $5.884078218 \times 10^{-7}$ $\pm$ 2.697330087 %
- The initial flux (unit: 1/reduced): $f_A =$ 0.440966126 $\pm$ 0.107224999 %
- The rate constant (unit: 1/reduced): $k_{AB} =$ $2.594679179 \times 10^{-7}$ $\pm$ 2.699460464 %

Detailed results are given below for the different path ensembles and the overall results are summarized in the last section.

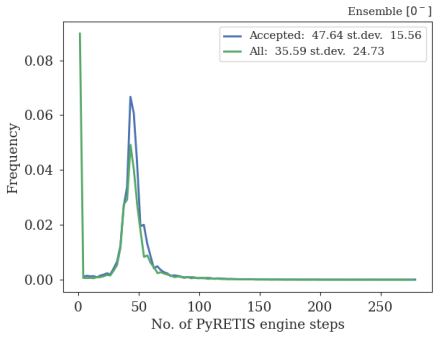
1 Results for $[0^-]$

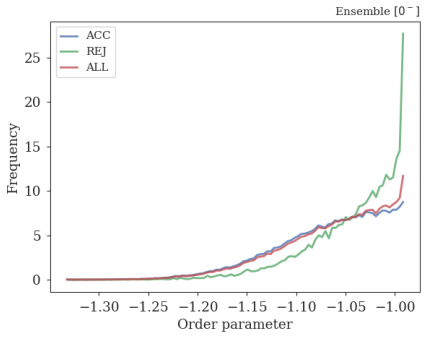
Table 1: Interfaces

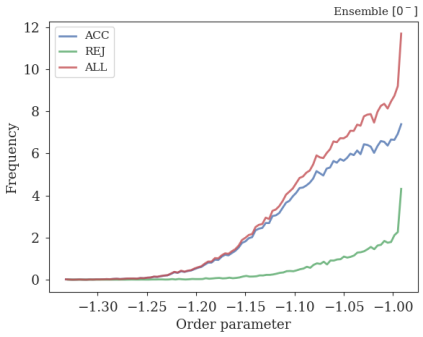
Ensemble	Left	Middle	Right
$[0^-]$	$-inf$	−0.9900	−0.9900

Table 2: Path lengths

Ensemble	Accepted	All	All/Accepted
$[0^-]$	47.637510	35.585070	0.746997







2 Results for path ensembles

The following interfaces were used in the simulation and in the analysis:

Table 3: Interfaces

Ensemble	Left	Middle	Right	Detect
$[0^+]$	−0.9900	−0.9900	1.0000	−0.8000
$[1^+]$	−0.9900	−0.8000	1.0000	−0.7000
$[2^+]$	−0.9900	−0.7000	1.0000	−0.6000
$[3^+]$	−0.9900	−0.6000	1.0000	−0.5000
$[4^+]$	−0.9900	−0.5000	1.0000	−0.4000
$[5^+]$	−0.9900	−0.4000	1.0000	−0.3000
$[6^+]$	−0.9900	−0.3000	1.0000	1.0000

The calculated crossing probabilities are:

Table 4: Probabilities

Ensemble	P_{cross}	Error	Rel. error (%)
$[0^+]$	0.159320	0.001156	0.725550
$[1^+]$	0.155644	0.001188	0.762990
$[2^+]$	0.118421	0.000997	0.841678
$[3^+]$	0.112031	0.001021	0.911280
$[4^+]$	0.129023	0.001068	0.828102
$[5^+]$	0.175028	0.001392	0.795054
$[6^+]$	0.079202	0.001441	1.819422

The crossing probabilities are also displayed in the figures below

2.1 Crossing probabilities

2.2 Distributions for path lengths and shooting moves

The average path lengths in the different ensembles are given in the table below and some distributions for the path lengths and shooting moves can also be found here:

Table 5: Path lengths

Ensemble	Accepted	All	All/Accepted
$[0^+]$	47.072405	33.545254	0.712631
$[1^+]$	55.849398	27.538960	0.493093
$[2^+]$	60.684337	29.963783	0.493765

3 Combined results

The overall matched probability distributions are shown in the left figure while the matched probability distribution is shown in the right figure below. The overall crossing rate as a function of cycles and its relative error block analysis are reported in the two following plots, respectively.

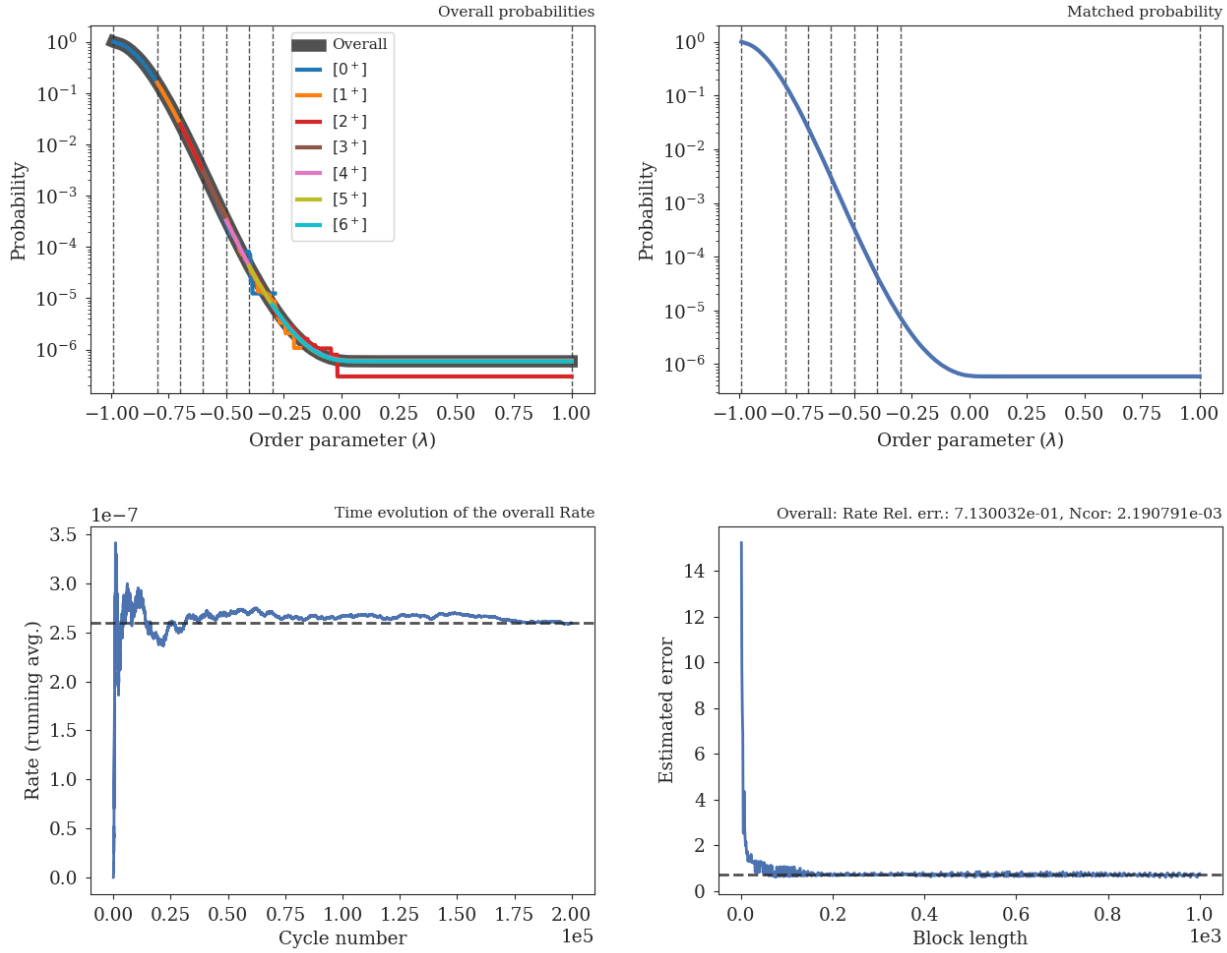

Table 7: Summary of main results

Property	Value	Relative error (%)
Crossing probability	$5.884078218 \times 10^{-7}$	2.697330087
Flux (1/reduced)	0.440966126	0.107224999
Rate constant (1/reduced)	$2.594679179 \times 10^{-7}$	2.699460464

Other statistics:

- sim.time: 5.069312416×10^7
- $\tau_{\text{eff}} = 3.688223667 \times 10^4$

- $\tau_{\text{eff}}^{\text{opt}} = 3.387588952 \times 10^4$
